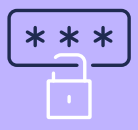
Pentera Credential Exposure

Test for Cyber Identity Risks from Stolen or Leaked Credentials

Harden Your Credential And Identity Attack Surface

Automate the discovery and testing of compromised identities against your internal and external attack surfaces. Know the real-world impact of leaked credentials and prioritize remediation to eliminate identity threat exposure.

Key Product Pillars



Continuous Feeds
Receive real-time leaked credential data from threat intelligence feeds and see how adversaries could potentially use these credentials against your infrastructure and applications.

All Attack Surfaces
Test across all attack surfaces – internal, external, and cloud - to identify exploitable active credentials.

Multi-Format Testing
Validate leaked credentials in multiple formats, whether they are hashed, appear in clear text, in both full or partial user and login sets.

Targeted Remediation
Retire compromised credentials, update password security policies, and trigger SOAR corrective action workflows.

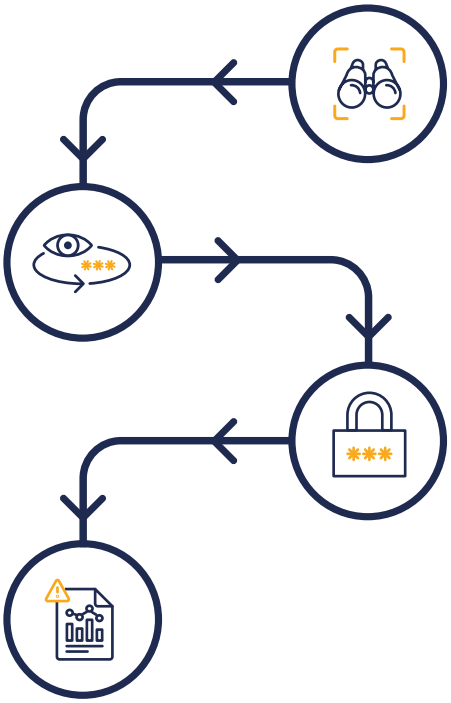
How it works

Reconnaissance & Assessment

Map internal and external attack surfaces to identify potential points of compromise and credential exploitation opportunities.

Credential Intelligence

Collect leaked credential data associated with your domain. Monitor continuous feeds containing millions of credentials distributed in the open and dark web, including data recaptured from infostealers.

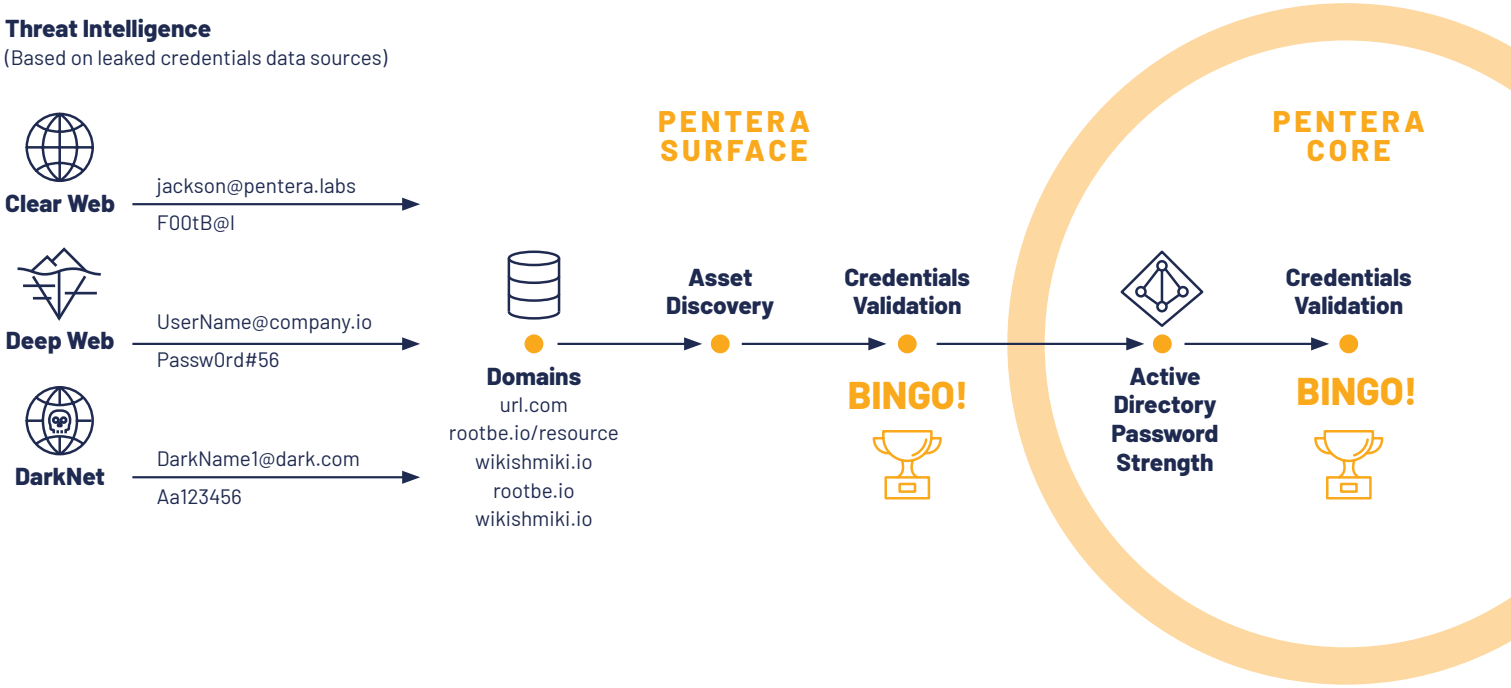


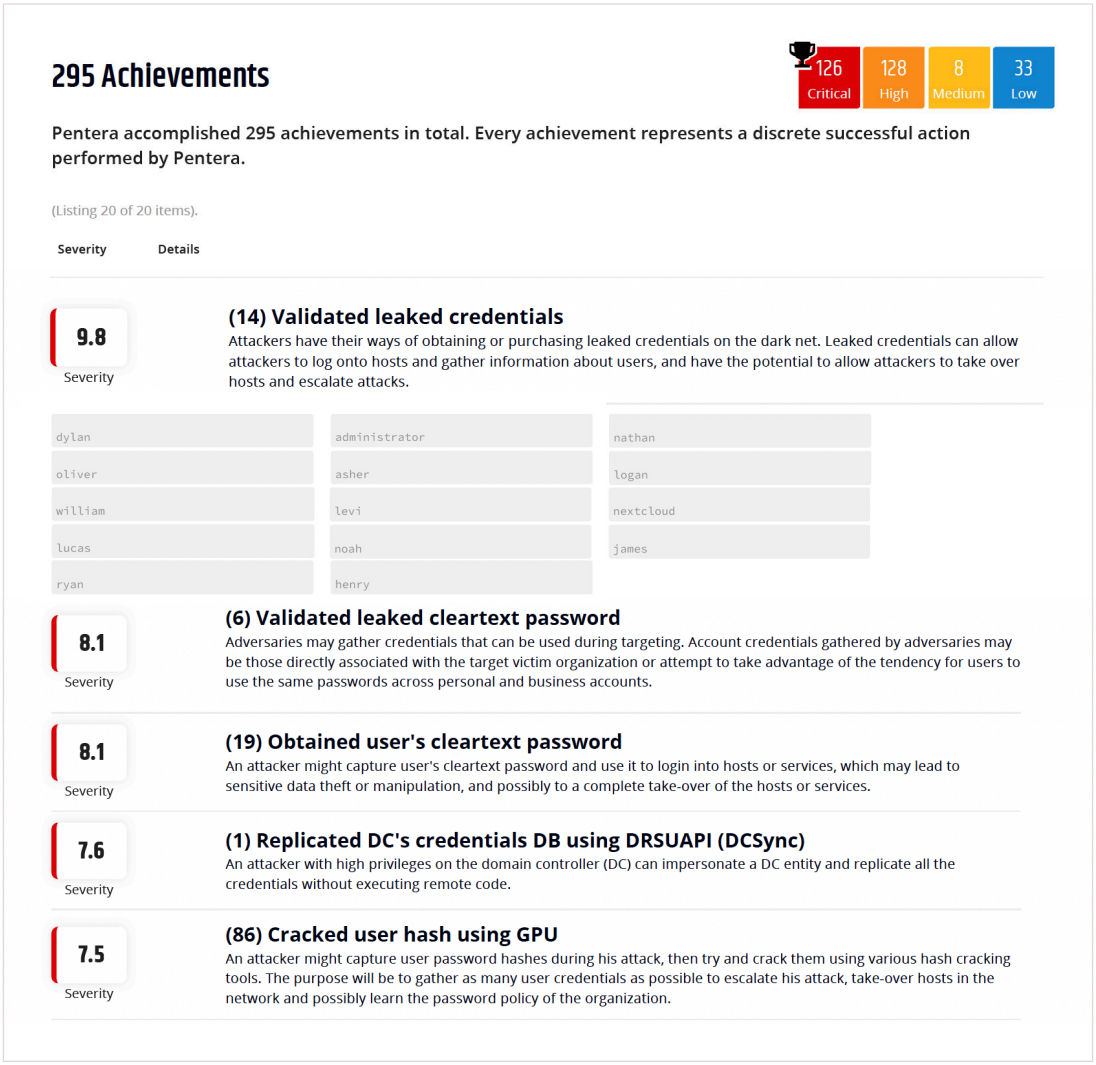
Exposure Validation

Test leaked credentials against your attack surfaces using techniques like password cracking and credential stuffing. Map full attack paths to see potential impact.

Remediation & Reporting

Receive detailed reports of findings for immediate action to reduce exposure. Retire active compromised credentials, trigger SOAR corrective workflows, and improve secure access policies.





Benefits

+ Reduce cyber risk exposure

Beat adversaries in identifying and remediating leaked and stolen credential exposures.

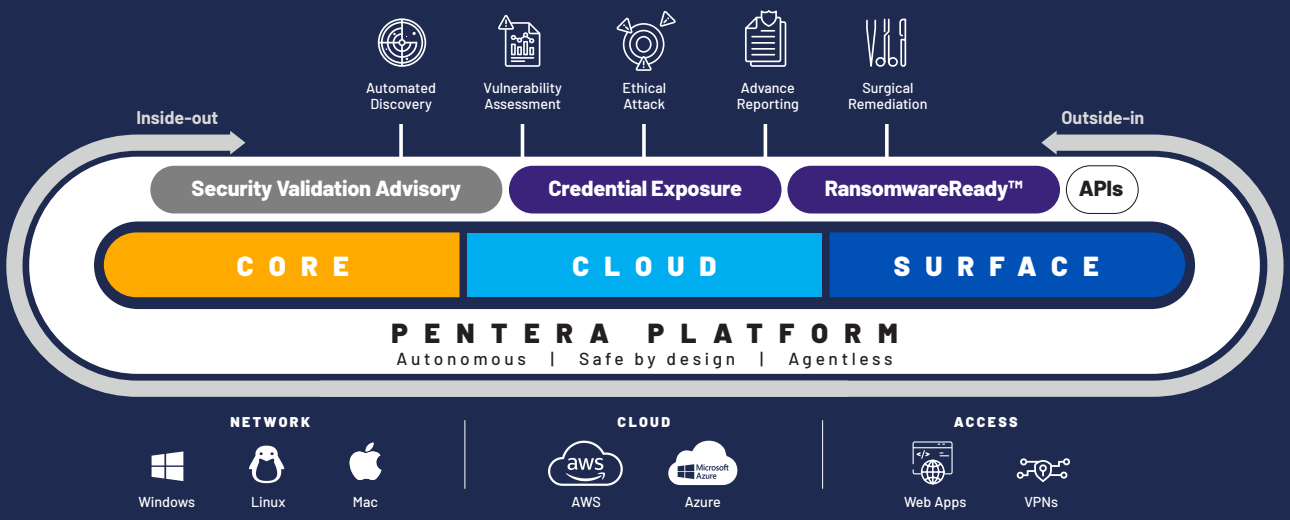
+ Reduce manual testing work

Eliminate the manual process of matching threat intelligence with active credentials.

+ Prioritize credential exposure based on true impact

Focus on the 1% of leaked credentials that are proven to be exploitable.

All your attack surfaces, tested continuously with the Pentera Platform



About Pentera

Pentera is the category leader for Automated Security Validation™, allowing every organization to test with ease the integrity of all cybersecurity layers, unfolding true, current security exposures at any moment, at any scale. Thousands of security professionals and service providers around the world use Pentera to guide remediation and close security gaps before they are exploited.
